

Status update · for Troy Rathbun & Jennifer · June 8, 2026

Where We Are & What's Outstanding

The core experience tested well — we're refining, not rebuilding. The structural changes and the biggest new feature (Explore Regions) are in and working on real Red Cross data.

-  **Refining, Not Rebuilding**
- Remaining work is content depth in Collections, a few Ops Workbench enhancements, and items waiting on Troy or Marketing & Communications.

To Discuss Today — Jennifer & Troy

Open design question

- **Interactive territory map inside the Collections tile.** Troy's notes ask for “territory footprint map visualizations” with Division / Region / Chapter filters. Decide together — embed a live map directly inside a Collections slide, or a button on the slide that opens the map in a pop-up modal with an accordion? Settle scope and which slide before we build it.

Done

Shipped & live

- Home page: renamed to “Inside BioMed Capabilities.”
- Nine-tile structure: confirmed at nine tiles, ordered foundation to regional.
- Tile 6 — Jurisdiction Dashboard: BioMed Blood Map merged into the Jurisdiction Dashboard (one authoritative geography view, no duplicate map).
- Tile 9 — Explore Regions: built and live on real layers — region selection, live FY collection metrics, fixed sites, and the Red Cell fixed-site trade-area polygons (Troy's FS Map Layer). Community impact, donor diversity, and Sickle Cell now live here.
- Content moves: Clara AI / RapidPass / Track Your Blood moved into Blood Journey; Sickle Cell moved into Explore Regions.
- Volunteers: volunteer sections present in Blood 101, Blood Journey, Hospital Distribution, and Collections.
- Data Sources & Methodology: new “About the Data” modal — the source-traceability layer Troy asked for. Lists datasets, refresh status, definitions, methodology, limitations, and stewards. Available app-wide; not a tenth tile.

In Progress

Building now

- **Tile 5 — BioMed Collections:** restructure into Mobile Collections and Fixed Sites (including the Fixed Site Growth Program), add the Diversity / population section, Division/Region/Chapter filters, a high-level territory map, and the BioMed-vs-Humanitarian-Services boundary disclaimer.
- **Tile 7 — Operations Workbench:** design retained as requested. Still to add — GOAT boundary bookmarks (Division/Region/District/Chapter), boundary disclaimer, and confirm the infrastructure layers (Staging, Manufacturing, Kitting, IRL, Distribution) are the authoritative ones.

Outstanding — Needs Troy

Data & decisions

- Future Demand — verify the flagged numbers and confirm sources before finalizing.
- Tile 8 — Hospital Network: held for Troy's dashboard concept (placeholder, not over-built).
- Platelet (SDP) trade areas — confirm the blessed current SDP layer before adding a red-cell / platelet toggle.
- Regional detail metrics (chapters, hospitals served, staging, products distributed) — “to be determined.”
- Complete data sources list to finish populating About the Data.

Outstanding — Needs Jennifer / Marketing & Communications

Language sign-off

- Validate Blood 101 content and all volunteer, diversity, and Sickle Cell language.
- Confirm which Future Demand figures were the concern.

Note on data — Where BioMed-specific regional numbers aren't available yet, regional geography and population context use Red Cross Humanitarian Services geography — labeled as such, for discussion, until BioMed figures are finalized.
